Labour market statistics

The labour market statistics information release combines data from three surveys to present a broad picture of the labour market.

From the **Household Labour Force Survey (HLFS)** we provide a picture of New Zealand's labour force – these statistics relate to employment, unemployment, and people not in the labour force.

The **Quarterly Employment Survey (QES)** estimates the demand for labour by New Zealand businesses – the levels and changes in employment, total weekly gross earnings, total weekly paid hours, average hourly and average weekly earnings, and average weekly paid hours in the industries we survey.

The **Labour Cost Index (LCI)** measures changes in salary and wage rates for a fixed quantity and quality of labour input. It is a measure of wage inflation, reflecting changes in the rates that employers pay to have the same job done to the same standard.

[Household Labour Force Survey sources and methods: 2016](#) provides a technical description of the sample design and other aspects of the HLFS.

Business Register

The list of all economically significant enterprises in New Zealand, which is maintained by Statistics NZ.

Disability

Disability status is determined by a set of questions ([The Washington Group Short Set](#)), that ask respondents about their ability to carry out six basic activities.

The activities are:

- seeing, even if wearing glasses
- hearing, even if using a hearing aid
- walking or climbing steps
- remembering or concentrating
- washing all over or dressing
- communicating

The response options are:

- No difficulty
- Some difficulty
- A lot of difficulty
- Can't do at all

People who respond 'a lot of difficulty' or 'can't do at all' to at least one of the activities are counted as disabled in the survey.

Employed

People in the working-age population who, during the reference week, did one of the following:

- worked for one hour or more for pay or profit in the context of an employee/employer relationship or self-employment

-

worked without pay for one hour or more in work which contributed directly to the operation of a farm, business, or professional practice owned or operated by a relative

-

had a job but were not at work due to own illness or injury, personal or family responsibilities, bad weather or mechanical breakdown, direct involvement in an industrial dispute, or leave or holiday.

Employment rate

The number of employed people expressed as a percentage of the working-age population. The employment rate is closely linked to the working-age population definition.

Enterprise

A business or service entity operating in New Zealand.

Extended labour force

People in the labour force, or in the potential labour force.

Filled jobs

The total number of full-time jobs, part-time jobs, and working proprietors.

Full-time equivalent (FTE) jobs

The total number of full-time jobs plus half the number of part-time jobs. Does not include working proprietors.

Full-time jobs

Jobs where the employee works for 30 hours or more per week.

Full-time/part-time status

Full-time workers usually work 30 hours or more per week, even if they did not do so in the survey reference week because of sickness, holidays, or other reasons. Part-time workers usually work fewer than 30 hours per week.

 Hours worked

Actual hours are the number of hours a person worked in the reference week (including overtime). Usual hours refers to the number of hours a person normally works in a week (including overtime).

 Index reference period

The benchmark with which prices in other periods are compared (eg if the index number in a later period is 1150, prices have increased by 15.0 percent since the index reference period). Prices for later periods can also be compared in the same fashion. The LCI has an index reference period of the June 2009 quarter (=1000).

 Industry

Determined from the Australian and New Zealand Standard Industrial Classification (ANZSIC) 2006. Businesses in QES are classified using ANZSIC06 industries. See ANZSIC 2006 – industry classification for more information about ANZSIC06 and its implementation into the QES and other Statistics NZ collections.

 Labour force

Members of the working-age population, who during the survey reference week, were classified as 'employed' or 'unemployed'.

 Labour force participation rate

The total labour force expressed as a percentage of the working-age population. Labour force participation is closely linked to how the working-age population is defined.

 NEET (not in employment, education, or training)

Young people aged 15–24 years who are unemployed (part of the labour force) and not engaged in education or training, and those not in the labour force and not engaged in education or training for many reasons.

 NEET rate

The total number of youth (aged 15–24 years) who are not in education, employment, or training (NEET), as a proportion of the total youth working-age population.

 Not in the labour force

Any person in the working-age population who is neither employed nor unemployed. For example, this residual category includes people who

- are retired
-

have personal or family responsibilities such as unpaid housework and childcare

-

attend educational institutions

-

are permanently unable to work due to physical or mental disabilities

-

were temporarily unavailable for work in the survey reference week

-

are not actively seeking work.

Part-time jobs

Jobs where the employee works less than 30 hours per week.

Potential labour force

People who are not actively seeking but are available and wanting a job and people who are actively seeking but not currently available, but will be available to work in the next four weeks.

Price index

Measures the change in price between time periods for a given set of goods and services. It summarises a set of prices for a variety of goods and services collected from a number of outlets.

Seasonally adjusted series

Removes the seasonal component present when dealing with quarterly data. Seasonal patterns obscure the underlying behaviour of the series.

Statistically significant

Statistical assessment of whether a change in the series is systematic or simply due to chance. Systematic movements occur when the change is greater than its respective sampling error.

Trend series

Removes both the seasonal and irregular component of the series and reveals the underlying direction of movement in a series.

Underemployment

People who are in part-time employment who would like to, and are available to, work more hours.

 Underemployment rate

The number of underemployed people expressed as a percentage of the employed population.

 Underutilised

The sum of those unemployed, underemployed and in the potential labour force.

 Underutilisation rate

The number of underutilised people expressed as a proportion of those in the extended labour force.

 Unemployed

All people in the working-age population who, during the reference week, were without a paid job, available for work, and had either actively sought work in the past four weeks ending with the reference week, or had a new job to start within the next four weeks.

 Unemployment rate

The number of unemployed people expressed as a percentage of the labour force.

 Union Membership

Whether an employee belongs to a union in their main job.

 Working proprietors

Includes sole proprietors, partners, or shareholders in a limited liability company who actively engage in the business or its management. Please note that working proprietors in businesses with no employees are outside the scope of the QES and are not included in the estimate of filled jobs.

 Working-age population

The usually resident, non-institutionalised population of New Zealand aged 15 years and over.

People who respond 'a lot of difficulty' or 'can't do at all' to at least one of the activities are counted as disabled in the survey.

Employed

People in the working-age population who, during the reference week, did one of the following:

- worked for one hour or more for pay or profit in the context of an employee/employer relationship or self-employment

-

worked without pay for one hour or more in work which contributed directly to the operation of a farm, business, or professional practice owned or operated by a relative

-

had a job but were not at work due to own illness or injury, personal or family responsibilities, bad weather or mechanical breakdown, direct involvement in an industrial dispute, or leave or holiday.

Employment type

We measure four different employment types in the HLFS: employee, employer, self-employment, and unpaid family worker. The HLFS defines a person as self-employed if they work for themselves and do not have any employees.

Employment rate

The number of employed people expressed as a percentage of the working-age population. The employment rate is closely linked to the working-age population definition.

Employment relationship

Distinguishes between different types of employees, according to whether they have a permanent or temporary work arrangement and what type of temporary work arrangement.

Extended labour force

People in the labour force, or in the potential labour force.

Formal study statistics

To be participating in formal study, a person must be working towards a qualification that takes three or more months of full-time study to complete. Full-time study is defined as 20 or more hours per week.

Full-time/part-time status

Full-time workers usually work 30 hours or more per week, even if they did not do so in the survey reference week because of sickness, holidays, or other reasons. Part-time workers usually work fewer than 30 hours per week.

Hours worked

Actual hours are the number of hours a person worked in the reference week (including overtime). Usual hours refers to the number of hours a person normally works in a week (including overtime).

Industry

Determined from the Australian and New Zealand Standard Industrial Classification (ANZSIC) 2006. Businesses in QES are classified using ANZSIC06 industries. See ANZSIC 2006 – industry classification for more information about ANZSIC06 and its implementation into the QES and other Statistics NZ collections.

Labour force

Members of the working-age population, who during the survey reference week, were classified as 'employed' or 'unemployed'.

Labour force participation rate

The total labour force expressed as a percentage of the working-age population. Labour force participation is closely linked to how the working-age population is defined.

NEET (not in employment, education, or training)

Young people aged 15–24 years who are unemployed (part of the labour force) and not engaged in education or training, and those not in the labour force and not engaged in education or training for many reasons.

NEET rate

The total number of youth (aged 15–24 years) who are not in education, employment, or training (NEET), as a proportion of the total youth working-age population.

Not in the labour force

Any person in the working-age population who is neither employed nor unemployed. For example, this residual category includes people who

- are retired
-
- have personal or family responsibilities such as unpaid housework and childcare
-
- attend educational institutions
-
- are permanently unable to work due to physical or mental disabilities
-
- were temporarily unavailable for work in the survey reference week
-

are not actively seeking work.

 Part-time jobs

Jobs where the employee works less than 30 hours per week.

 Potential labour force

People who are not actively seeking but are available and wanting a job and people who are actively seeking but not currently available, but will be available to work in the next four weeks.

 Seasonally adjusted series

Removes the seasonal component present when dealing with quarterly data. Seasonal patterns obscure the underlying behaviour of the series.

 Statistically significant

Statistical assessment of whether a change in the series is systematic or simply due to chance. Systematic movements occur when the change is greater than its respective sampling error.

 Trend series

Removes both the seasonal and irregular component of the series and reveals the underlying direction of movement in a series.

 Underemployment

People who are in part-time employment who would like to, and are available to, work more hours.

 Underemployment rate

The number of underemployed people expressed as a percentage of the employed population.

 Underutilised

The sum of those unemployed, underemployed and in the potential labour force.

 Underutilisation rate

The number of underutilised people expressed as a proportion of those in the extended labour force.

 Unemployed

All people in the working-age population who, during the reference week, were without a paid job, available for work, and had either actively sought work in the past four weeks ending with the reference week, or had a new job to start within the next four weeks.

 Unemployment rate

The number of unemployed people expressed as a percentage of the labour force.

 Union membership

Whether an employee belongs to a union in their main job.

 Working-age population

The usually resident, non-institutionalised population of New Zealand aged 15 years and over.

 Labour cost index

- [Distribution of increases in surveyed pay rates - Distribution of increases in surveyed pay rates](#)
- [Average increase - Average increase](#)
- [Median increase - Median increase](#)

 Distribution of increases in surveyed pay rates

Surveyed salary and ordinary time wage rates (and overtime wage rates) are compared with those of the previous quarter and the same quarter of the previous year, and grouped according to whether they decreased, showed no change, or increased. In the case of ordinary time rates, the increases are divided into the following ranges: increases of up to 2 percent, more than 2 but not more than 3 percent, more than 3 but not more than 5 percent, and more than 5 percent

 Average increase

The unweighted arithmetic mean increase of those surveyed salary and ordinary time wage rates that rose from the previous quarter and from the same quarter of the previous year.

 Median increase

The unweighted median (i.e. middle) increase of those surveyed salary and ordinary time wage rates that rose from the previous quarter and from the same quarter of the previous year.

 QES Concepts

- [Business Register - Business Register](#)

- [Earnings - Earnings](#)
- [Employment - Employment](#)
- [Enterprise - Enterprise](#)
- [Full-time equivalent \(FTE\) jobs - Full-time equivalent \(FTE\) jobs](#)

- [Hours Paid - Hours Paid](#)
- [Industry - Industry](#)
- [Part-time jobs - Part-time jobs](#)
- [Working proprietors - Working proprietors](#)
- [Filled jobs - Filled jobs](#)

Business Register

The list of all economically significant enterprises in New Zealand, which is maintained by Statistics NZ.

Earnings

Earnings estimates are based on payroll data received from economically significant businesses. Businesses provide the total amount of wages/salaries paid to employees by gender and from here earnings figures such as average hourly earnings, and average weekly earnings are derived. Gross earnings can include shift, penal and other allowances, ACC earners premiums, bonuses, paid leave and commissions earned in the pay period. However, it excludes payments not earned in the pay period (e.g. back pay, redundancy or severance pay) and non-taxable payment (e.g. tool money).

Employment

Employment estimates are based on filled jobs in economically significant businesses. If a person has a paid job in the reference week they are considered employed. This includes employees even if they are absent from work (e.g. due to sickness, being on leave, on strike or temporary lay-off, etc.) whether paid or not. This also includes all managerial or executive staff (e.g. Chief Executive).

Enterprise

A business or service entity operating in New Zealand.

Full-time equivalent (FTE) jobs

The total number of full-time jobs plus half the number of part-time jobs. Does not include working proprietors.

Full-time jobs

Jobs where the employee works for 30 hours or more per week.

 Hours Paid

Hours paid is represented by any ordinary time and overtime hours for which an employee has been paid. The concept of hours paid includes paid travelling time, hours represented by holiday pay, sick pay, etc. It is not restricted to just hours that have been worked.

 Industry

Determined from the Australian and New Zealand Standard Industrial Classification (ANZSIC) 2006. Businesses in QES are classified using ANZSIC06 industries.

 Part-time jobs

Jobs where the employee works for less than 30 hours per week.

 Working proprietors

Includes sole proprietors, partners, or shareholders in a limited liability company who actively engage in the business or its management. Please note that working proprietors in businesses with no employees are outside the scope of the QES and are not included in the estimate of filled jobs.

 Filled jobs

The total number of full-time jobs and part-time jobs.

Universes

 Labour Market Statistics Universe set

- [Labour Market Statistics Universe](#)

 Labour Market Statistics Universe

HLFS/Income

The target population for the HLFS/Income is the usually resident, non-institutionalised population aged 15 years and over. The statistics in this release do not cover:

- people who have been living in New Zealand for less than 12 months, and who do not propose to stay in New Zealand for a total of 12 months or more
- long-term residents of homes for older people, hospitals, and psychiatric institutions (long-term is defined as six weeks or more)
- people in prison

QES

The QES samples economically significant enterprises in surveyed industries. An economically significant enterprise is one that meets at least one of the following criteria:

- has greater than \$30,000 annual GST expenses or sales
- has at least three employees for its rolling mean employment (the average employee count over the previous 12 months)
- recorded over \$40,000 of income in the IR10 annual tax return
- is part of a group of enterprises
- is a new GST registration that is compulsory, special, or forced
- is registered for GST.

The QES does not include data from the agriculture, fisheries, and several smaller industries.

LCI

Jobs filled by paid employees in all occupations and in all industries except private households employing staff. We extended coverage to include jobs filled by paid employees aged under 15 years when the index was reweighted and re-expressed on a base of the June 2001 quarter (=1000).

- [Employment and unemployment - Employment and unemployment](#)

 Employment and unemployment

 Labour Market Statistics: March 2021 quarter

Title

Labour Market Statistics: March 2021 quarter

Data Collections

Labour Market Statistics: March 2021 quarter

#####Period-specific information

#####Response Rates

See [New quality measures for the Household Labour Force Survey](#) for more information on the sample rate and response rates.

#####HLFS

#####Coverage rates

Usually the undercoverage rate in the HLFS is around 20 percent. The overall undercoverage rate for the HLFS in the March 2021 quarter was 21 percent. This compares with 20.7 in the December 2020 quarter and 20.4 percent in the March 2020 quarter.

#####New Sample

Following every census we review the HLFS sample, and starting in the December 2020 quarter we have introduced some updates into the sample design.

The new sample will be rolled in over eight quarters. Each quarter, one-eighth of the households in the old sample is rotated out and replaced by a set of households in the new sample.

The primary sampling units (PSUs) of the HLFS are small geographic areas contain approximately 70-100 households. Over time these PSUs can change in size due to population movements, and therefore need to be recreated periodically. December 2020 was the first quarter to be selected on newly created PSUs, which were last recreated in 2014.

The sample is selected from these new PSUs to ensure it is representative across different regions, urban areas, labour force participation rates and NZ Deprivation rates.

For the March 2021 quarter, one quarter of the households are from the new sample.

#####Changes to seasonal adjustment for HLFS series

Due to the unprecedented impact of COVID-19 in the June and September 2020 quarters, several seasonally adjusted series were specially treated to maintain a consistent estimate of the seasonal pattern. See [Impact of COVID-19 on seasonally adjusted and trend series](#)

As of the December 2020 quarter, the effect of COVID-19 on key labour market series is no longer significant enough to require continued intervention. Interventions that were implemented on the June and September quarters seasonally adjusted values will remain in place.

As of the March 2021 quarter, there is sufficient data to allow for calculation and publication of a stable trend series.

#####Outliers

During the seasonal adjustment process, X-13-ARIMA-SEATS can give less weight to the irregular component. Specifically, if the estimated irregular component at a point in time is sufficiently large compared with the standard deviation of the irregular component as a whole, then the irregular component at that point can be downweighted or removed completely and re-estimated. We refer to such observations as partial- and zero-outliers, respectively. In practice, the downweighting of outliers does little to seasonally adjusted data, but the impact of the outliers on the trend series will generally be reduced. However, if an outlier ceases to be an outlier as more data becomes available, then significant revisions to the trend series become possible.

There were no outliers in our main series in the last year.

#####Revisions to HLFS

Each quarter, we apply the seasonal adjustment process to the latest quarter and all previous quarters. Every estimate is subject to revision each quarter as new data is added, which means that seasonally adjusted estimates for previous quarters may change slightly. In practice, estimates more than two years from the end-point will change little.

This table lists the changes in estimates between the current and previous quarters for the seasonally adjusted data.

This table presents revisions for the trend estimates. Trend revisions are generally larger than those of the seasonally adjusted data.

The table below shows the average of all such absolute revisions, expressed relatively, and indicates to what extent the current estimates might be revised when the revised data for the next quarter becomes available.

#####QES

#####Response rate

The response rate for the Quarterly Employment Survey in the March 2021 quarter was 87.3 percent.

#####New survey design

The QES is a stratified sample representing most businesses in the New Zealand economy. The survey has been

redeveloped to ensure the QES remains fit-for-purpose.

Part of the redevelopment is a new representative sample which is integral to producing accurate measures. While efforts have been made to ensure consistency between the different designs, March 2021 is the first quarter of the new sample design and some changes are expected. A refresh of businesses and weights in the sample can cause larger movements than normal. Previous quarters have undergone back-casting to minimise inconsistencies in the output data. However, these are provisional and are not able to account for all changes. Hence, movement data should be used with caution.

See [Redesign of the quarterly employment survey](#) for more data quality notes and information.

#####LCI

The LCI measures changes in salary and wage rates for a fixed quantity and quality of labour. LCI data is collected by postal and electronic surveys.

For the March 2021 quarter, respondents were asked to report pay rates on the reference date of February 15th 2021. The response rate was 95.6 percent, exceeding the target response rate of 94 percent (including targets of 100 percent for key firms, and 94 percent for all other respondents).

#####General information and methodology

For general information and methodology on the specific surveys within the labour market statistics release, please see the following Datainfo+ pages:

- [Household Labour Force Survey](#)
- [Labour Cost Index](#)
- [Quarterly Employment Survey](#)
